Wabash, Indiana 46992
(260) 563-0661 Ext. 251 or 283

MAP REQUIREMENTS

We must have a *plot design map* of your proposed onsite sewage disposal system, as well as a completed application, in order to proceed with your permit. Once we have received and approved your plot design map and application, we will be able to issue your permit.

The plot design map will need to include the following:

1. All property lines and easements with measurements.
2. Location of all existing and proposed structures, driveways, ditches, creeks and all water ways.
3. Location of water well(s), including that of any neighbor's well(s), if applicable, with a 50 foot well radius.
4. Location and labeling of soil boring profiles performed at the site.
5. Complete design of onsite sewage disposal system with dimensions, including a cross section of system with measurements.
6. Measurements from home to septic tank.
7. Measurements from septic tank to distribution box, if applicable, with elevations.
8. Grade elevations at all four corners and center of proposed onsite sewage disposal system.
9. Invert elevation of exposed working outlet for subsurface drain.
10. Perimeter drain location on property. If no outlet is available on the lot, then a copy of the easement must be submitted with application.

Please Note: Elevated sand mounds must be of engineer design quality.
